EDUCATION

VNR Vignana Jyothi Institute of Engineering and Technology
B.Tech, Computer Science and Engineering (AI & ML) **CGPA: 8.97 / 10.0**

Hyderabad, Telangana
Sep 2024 – Present

PROJECTS

- AI-Powered Corporate Credit Intelligence Platform** | *FastAPI, React, PostgreSQL, Qdrant* 🐙 GitHub
- Architected a containerized underwriting platform using FastAPI, React 19, PostgreSQL, and Qdrant, orchestrating a 5-service Docker Compose stack for case intake, document processing, AI scoring, and credit decision workflows.
 - Engineered a credit scoring engine that analyzed financial documents using pdfplumber, performed GST-bank mismatch anomaly detection and risk analysis, and generated explainable Lend/Reject recommendations with facility limits.
 - Built an AI-powered underwriting copilot using LangChain LCEL, Gemini 2.0 Flash, Tavily, and Qdrant, combining RAG-based research, semantic retrieval, and concurrent inference to identify 20+ risk findings and generate evidence-backed Credit Assessment Memorandum (CAM) reports.
- AI-Powered Patient Recovery Monitoring System** | *FastAPI, React, PostgreSQL, Redis* 🐙 GitHub
- Deployed a containerized healthcare platform using asynchronous FastAPI backend and React frontend, enabling doctors to track recovery metrics and orchestrate real-time Socket.IO messaging for **1,000+ patients**.
 - Engineered PostgreSQL APIs using SQLAlchemy ORM and JWT, integrating Redis-backed rate limiting and AI response caching to reduce latency by **40%** while asynchronously processing **500+ concurrent webhook events**.
 - Implemented an escalation engine leveraging LLMs to parse natural language symptom logs and synthesize clinical trends, automatically triggering SOS workflows via SMTP and WhatsApp Business APIs.
- Real-Time Financial Market Intelligence Platform** | *FastAPI, PostgreSQL, WebSockets* 🐙 GitHub
- Architected a platform for detecting anomalous stock movements across 50+ NSE/BSE tickers, processing distributed streaming market data pipelines using rolling Z-score anomaly detection at 60-second intervals.
 - Engineered a scalable **microservices-based backend** using asynchronous FastAPI services and PostgreSQL, exposing REST APIs and WebSocket streams supporting **1,000 concurrent connections** with **sub-200ms latency**.
 - Implemented a two-stage event analysis pipeline for financial news and filings using spaCy entity filtering and deterministic search before invoking LLMs to synthesize explanations for **500+ daily events**.

EXPERIENCE & TRAINING

- Artificial Intelligence & Machine Learning Virtual Trainee** Sep 2025 – Oct 2025
IBM SkillsBuild
- Designed an AI-powered study assistant enabling interactive question answering and automated concept explanations using large language model APIs, implementing modular Python services to support concurrent study workflows.
 - Engineered API-driven pipelines integrating external LLM services for summarization, concept retrieval, and knowledge-based query responses, handling prompt orchestration, request routing, and response parsing.

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, SQL, JavaScript
Backend & APIs: FastAPI, Express.js, REST APIs, WebSockets, JWT, Microservices
Databases: PostgreSQL, MySQL, MongoDB, Redis
Infrastructure & Tools: Git, Docker, Linux, Postman, VS Code, n8n, GitHub Actions
Machine Learning & AI: TensorFlow (Keras), Scikit-Learn, pandas, NumPy, OpenAI SDK

LEADERSHIP & ACTIVITIES

- Technical Volunteer, Krithomedh AI/ML Club.
Organized **AI Week '26**; authored the **ML Challenge problem**, deployed the competition on **Kaggle**, and designed problem statements for the **Vibe Coding Hackathon**, engaging **500+ participants**.
- Solved **300+ Data Structures and Algorithms problems** across Codeforces and LeetCode.

CERTIFICATIONS

Machine Learning Specialization — Stanford University & DeepLearning.AI (Andrew Ng, Coursera)
